# ONmail Business Pro: Email

## ONmail Business Pro

ONmail Business Pro is a Web-based email, calendaring, and file sharing service. Each enterprise account can support unlimited users with email @yourcompany.com addresses.

ONmail Business Pro provides administrative tools for managing users and accounts across an organization. Email accounts require a customer supplied domain name – such as johndoe@yourcompany.com – and come with 10GB of email storage and file sharing – the highest capacity of any online business application. With ONmail Business Pro, users can be up and running in minutes with a solution designed to meet their business needs.

## Browser & OS Support

ONmail Business Pro is accessible via the world's most popular Web browsers (including IE, Firefox, Netscape, and Mozilla), and operating systems including Microsoft Windows 2000, Windows XP, Vista and Macintosh OS X / Linux.

## Comprehensive Spam & Virus Protection

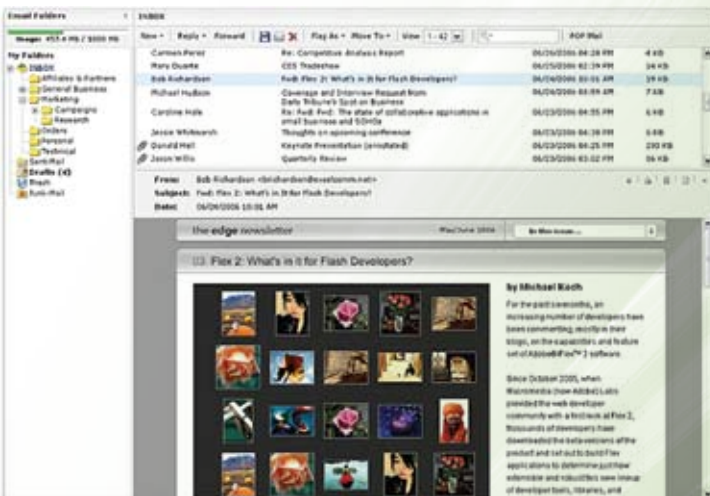

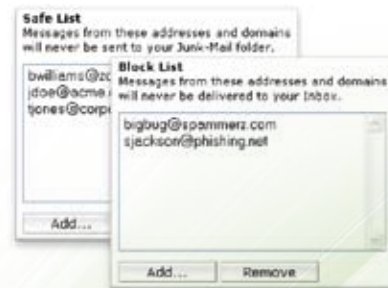

ONmail Business Pro uses industry-leading anti-spam and anti-phishing techniques to protect every account. On the server side, ONmail Business Pro uses a variety of spam filtering tools, including multiple Real-Time Blackhole List lookups, relay blocking, header inspection, and an advanced heuristics engine.

At the individual account level you can maintain your own “safe” and “block” lists to further protect your inbox and to individually define senders as either “good” or “bad”.

ONmail Business Pro performs server-side virus scanning to scan each message before it reaches your inbox. If a message contains a parasitic virus that can be removed, our system will attempt to clean it. Trojan horse viruses are stripped, and you receive a clean message. Our virus definitions are updated hourly to guard against new threats.

## Extra Protection for Critical or Confidential Material

ONmail Business Pro users also enjoy the ability to send encrypted files. SecureSend™, ONmail Business Pro encrypted file transfer feature, lets you send files with complete confidence, knowing that your confidential data will remain secure. SecureSend uses both asynchronous 128-bit triple-DES and synchronous AES encryption to ensure safe delivery of critical data.

# ONmail Business Pro: Calendar

## ONmail Business Pro: Calendar

ONmail Business Pro is a powerful calendaring system and integrated task management tool lets you easily schedule meetings with co-workers, view others' schedules, and collaborate on projects.

### Easily Manage Appointments

With ONmail Business Pro Calendar, scheduling appointments is simple. Just highlight a block of time and type a description. Or use QuickAdd - ONmail Business Pro natural language tool for scheduling appointments. Need to change an event's duration? Just resize it. Need to change the date or time? Just drag & drop. Or use the convenient right-click menus.

### Coordinate Schedules with the Click of a Mouse

Schedule meetings in a matter of seconds, with no phone calls, voice mails, waiting for callbacks, or wasted time.

To schedule meetings or other events with friends and co-workers, you can choose to send electronic meeting invitations with a suggested date and time, or use the powerful "find first available" feature that quickly searches each invitee's calendar to identify periods of common availability.

To view your co-workers' schedules overlaid on your own, just check the box next to their name. ONmail Business Pro Calendar even supports the industry-standard iCal format for scheduling appointments with company users.

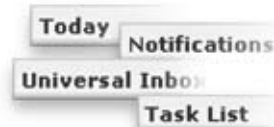

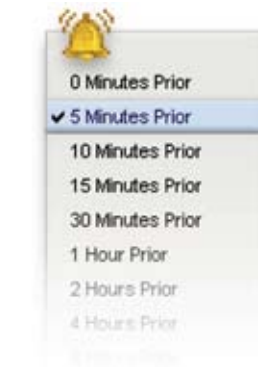

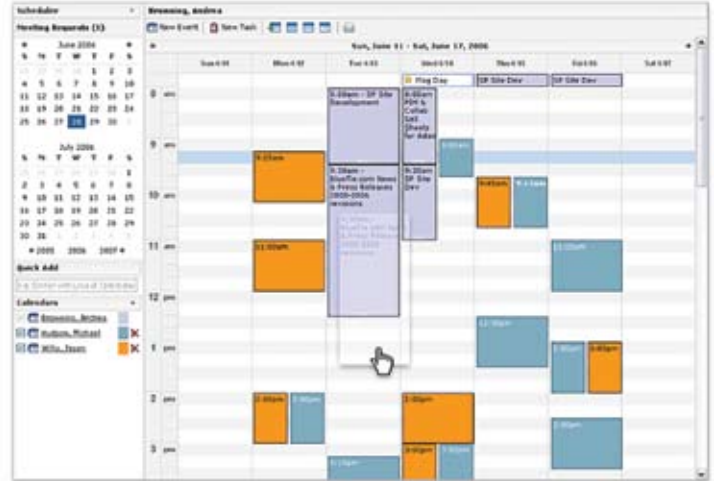

### Never Be Late Again

Choose from a variety of reminder intervals and modes, eliminating forgotten commitments. ONmail Business Pro calendar lets you choose the number of days, hours, or minutes prior to an event for your reminder to be delivered, and whether your reminder should be delivered via email or in a pop-up.

### Task Management Made Easy

With ONmail Business Pro Tasks you can easily track and manage multiple projects and deadlines throughout the day. Define new tasks, set due dates, and establish priorities. Each task is visually identified as not-yet-due, past-due, or completed. Whether your schedule is tightly packed, or you just enjoy keeping your work as organized as possible, ONmail Business Pro Tasks will help you effectively organize your business and personal life.

ONmail Business Pro Calendar and Task applications are fully integrated with a "My Day" dashboard that provides an at-a-glance overview of your appointments for the day, tasks currently due or past-due, and any new inbox items or other notifications.

# ONmail Business Pro: Files

## ONmail Business Pro: Files

ONmail Business Pro Files gives you online file storage and file sharing capabilities, all without the need to purchase a file server, and without the need to implement an expensive and cumbersome VPN for remote access.

## Access Documents Anywhere

ONmail Business Pro Files application lets you store important documents such as spreadsheets, product specifications and brochures, presentations, contract templates and more in your online file cabinet. Now anyone to whom you've assigned sharing privileges can have access to the latest document versions. Files can be organized in folders and sub-folders for easy retrieval.

## Easy Access, But Strong Security

ONmail Business Pro Files application combines strong security with simple access, making working from anywhere efficient as possible. All users are authenticated via SSL (HTTPS) using their unique ONmail Business Pro username and password.

## Share Files With Anyone

You can share folders with other ONmail Business Pro users, and can assign either "Read Only" or "Full Access" sharing privileges at the individual folder level.

ONmail Business Pro Pro users can choose to share folders with other ONmail Business Pro users, or even non-ONmail Business Pro users. Non-ONmail Business Pro users are sent an email containing a link they can use to access the folders that have been shared with them.

## Foster Productivity With a Collaborative Environment

Business associates working on documents in a collaborative environment will enjoy Files' check-out/check-in functionality for improved document version control. Updated documents can be shared with just a couple of clicks, ensuring that everyone is using the most up-to-date information.
